

CHALLENGE

6 Find the value of each shape.

$$1,250 - \triangle + \triangle = \text{pentagon}$$

$$1,000 + \triangle = 1,600 - \square$$

$$700 = \square + \square$$

I wonder which shape it is easiest to work out first.

$$\triangle = \square$$

$$\square = \square$$

$$\text{pentagon} = \square$$
